

Our 1000PL Series offers the classic round stool for smaller workspaces.

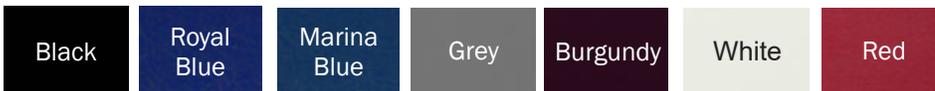

The seat height is adjusted by lifting up on a ring that is accessible when seated in any direction. With options for different casters/glides and a variety of upholstery options, the 1000PL is one of the most flexible seating options available.

This stool can be found in settings from laboratories to locker rooms, from medical offices to automotive plants. If you need a special application stool, we hope you'll check out the 1000PL. (It is also available in multiple bench heights with a footring.)
