

You will need:

- A clean, dry cloth
- Mineral oil (food-safe) or walnut oil

Step 1: Use a clean, dry cloth to remove any dust.

Step 2: Apply two coats of mineral or walnut oil, waiting at least 30 minutes between coats.

Note: Oil may settle into pools, redistribute as needed.

Step 3: After allowing the second coat to thoroughly soak, wipe away any excess oil with a clean cloth.

Repeat this procedure every 6-12 months to maintain.
